SCADA: SUPERVISORY CONTROL AND DATA ACQUISITION

Pro-Tek's system is completely customizable to client's applications

- The PLC computer can take in 15 expansion cards for a maximum of 492 digital channels
- The touch screen web site gives you complete access to your system with remote monitoring and control
- Data acquisitions from multiple total flow meters can be displayed on the touch screen or on the website
- Remote shut-in any well from your office in case of an emergency or storm in a specific area

PUMP CONTROLS

INCLUDES: 10 watt solar panel, 12 volt battery, and audible alarms for warnings of a low battery

SPECIFICATIONS

- Pump Controls monitor the levels inside tanks
- Pneumatic Pumps can be turned off and on at the correct levels
- Circulation valves can open or close when levels are reached
- Provides notification of wire failure (this notifies if your wire has been tampered with)
- Output relay can be set to signal a callout unit in the event that you have a low battery or wire fault to know that your pump control has stopped working
